Stepan Prilutskii

January 22, 2026

Caring for the preservation of the environment and preventing negative impacts on nature from the results of production activities are the most important daily tasks of the Company.

Fundamentals of environmental policy of **MECAMI FOR OIL AND GAS FIELD SERVICES (MECAMI MIDDLE EAST)** defines the purpose, basic principles and obligations of the enterprise in the field of environmental protection and ensuring environmental safety.

The goal of the company's **ENVIRONMENTAL POLICY** is to improve the level of environmental safety and ensure that the environmental management system complies with the requirements of the international standard ISO 14001.

**Main objectives of environmental policy
of MECAMI MIDDLE EAST:**

- Implementation of advanced energy saving technologies in production, transportation and distribution of thermal and electrical energy;
- Improvement of technological production processes in order to reduce energy losses and environmental pollution;
- Reduction of production waste and ensuring its safe handling;
- Continuous improvement of the professional level of employees, fostering a sense of responsibility for compliance with environmental safety requirements;
- Improving the enterprise's environmental management system.

**To implement the basic principles of environmental policy
MECAMI MIDDLE EAST undertakes the following obligations:**

- To strive to comply with all requirements of environmental legislation, regulatory documents in the field of environmental protection and rational use of natural resources and other requirements, and also undertakes to promptly execute and implement the necessary contracts and permits;
- To take into account the environmental factor when organizing the procurement of technologies, materials, raw materials, equipment, etc.;
- To improve industrial environmental control and monitoring using the latest analytical and information tools;
- To reduce specific indicators of environmental pollution;
- To improve the operation of environmental treatment plants in accordance with the requirements of regulatory and technical documentation;
- To ensure the availability of objective, scientifically based information on the impact of the enterprise on the environment in the areas of the company's presence;
- To conduct training and certification of enterprise employees in the field of environmental safety;
- To involve employees in active participation in work to comply with environmental safety requirements.
